-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7, 14-17 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,272,925 (Watson).

With regards to claims 1-7, 14-17 and 24, Watson discloses an electromechanical gyroscope, as illustrated in Figure 22, a pendulous sensor component 150 that reacts to a parameter; one or more pickoff sensors 164 that obtain a value of a rotation from a substantially zero net dampening torque location of the pendulous sensor component wherein a location of the one or more pickoff sensor promotes a reduction in a pressure sensitivity of the pendulous sensor component. (See, column 17, lines 31-46).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 8-13, 18-23 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,272,925 (Watson) in view of U.S. Patent 5,932,803 (Wyse).

With regards to claims 8-13, 18-23 and 25, Wyse teaches, as illustrated in Figures 1-7, the features as claimed in these claims. It would have been obvious to a person of ordinary skill in the art at the time of invention to have readily recognize the advantages and desirability of applying these features as suggested by Wyse to the apparatus of Watson without corresponding effect to a pendulous sensor. (See, column 5, line 62 to column 11, line 28).

#### ***Response to Amendment***

5. Applicant's arguments with respect to claims 1-25 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***
